The Internet of Things...
faster, cheaper and more secure.

Zipit®

IoT solutions enable companies to obtain business intelligence and create new digital experiences like never before. *They can also be complex and expensive to develop and implement.*

Through the use of highly scalable, cost-effective platforms like Amazon Web Services, combined with our own expertise in IoT device security and device management, **Zipit is able to significantly reduce the cost and complexity of developing and deploying IoT solutions.**

We Can Help You Make the Right IoT Choices.

Zipit is platform and device agnostic, so you don't have to worry about being tied to a specific vendor. No two IoT solutions have the same requirements, and so we consult with you to identify the **right hardware** and the **right platform** to achieve your business goals.

We Keep Your IoT Devices Secure.

We also have unique expertise in device management and IoT security - having developed, secured and provided ongoing support for enterprise IoT deployments for over a decade and across practically every vertical.

Zipit's IoT Services:

Consultation

Software Development

Device Monitoring / Diagnostics

Device Authentication

Over-the-air Upgrades

Global Connectivity Solutions

We leverage our strong relationships with global wireless carriers to provide your products with seamless and reliable connectivity, anywhere in the world. No IoT deployment is too big, or too small, or too complex for Zipit to be able to provide the right connectivity package that meets your needs.
