

# Replace Your Pager & Your Radio ...With One Device.

## Providing Push-to-talk (PTT) functionality for your Zipit device.

Zipit is committed to delivering the technology solutions customers need for time-sensitive, mission-critical situations.

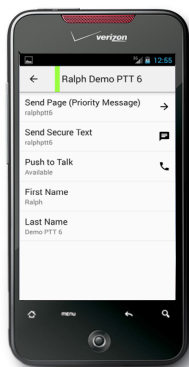

The Zipit Now™ TS and TSL devices can now be enabled with Push-to-talk communications\* as an added feature to compliment Zipit's HIPAA compliant secure texting and priority-based messaging services.

With this feature enabled, users have the option to send colleagues a priority message, engage individuals or groups in a secure text conversation, and now have push to talk calls with individuals or groups.

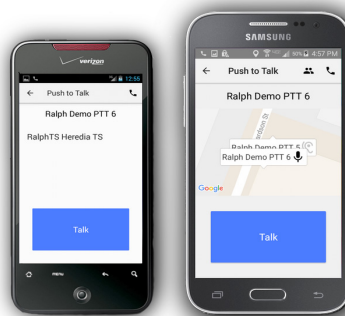

## Easy-to-use interface

By incorporating PTT within the Zipit platform, the function is incorporated seamlessly within your contact lists. Exchange secure texts, initiate and receive priority messages, or simply press a button to initiate a voice call.

Easy to use with one hand, PTT enables line workers to quickly notify supervisors of accidents, simplifies team-based duties for construction crews, and provides mobile workers with easy access to their colleagues, wherever they are.

Text, page, or talk to colleagues using a unified contact list for simplicity.

Add PTT to your Zipit Now TS or Zipit Now TSL device.

**Seamless Connection** — Zipit's dedicated messaging devices enable you to use PTT over both Wi-Fi or cellular networks - dynamically and transparently switching the network for seamless connectivity. In addition, Zipit uniquely provides HIPAA compliant texting, providing two powerful methods of business communication.

**FIPS for FedGov** — Zipit has the only solution that provides FIPS compliant messaging and PTT capability in a single, locked down device.

**Consolidate Devices** — Never again do you have to carry multiple devices just to communicate with your team members. Use one device that's flexible enough to work how and when you need it to.

## Specifics

- The most cost-effective solution
- The only dedicated, HIPAA compliant secure messaging device with PTT capability
- Works over Wi-Fi & cellular networks

### Perfect for:

- ER, OR, Code, and housekeeping teams
- Manufacturing line workers
- Field technicians
- Foremen & construction crews
- EMTs, First Responders
