

Turn any browser into a secure messaging platform.

Seamless Enterprise Messaging

Zipit Web Messenger, a key component of the Zipit Enterprise Critical Messaging Solution, enables users to securely communicate with team members using ANY PC or laptop through only a simple browser. Zipit Web Messenger enables seamless communication on an individual level, as part of a group, or even as a larger enterprise deployment with Zipit Now TS messaging devices or the Zipit Confirm app for smartphones and tablets.

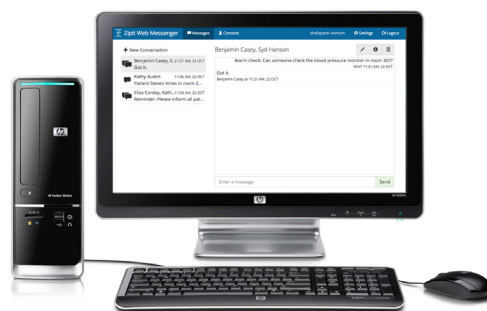

Secure. Reliable. Accountable.

Zipit Web Messenger is ideal for stationary personnel or supervisors that need to communicate with other Zipit users in the field in real time using a secure, reliable platform.

As part of the overall Zipit Enterprise Critical Messaging Solution, all communication in Zipit Web Messenger is automatically recorded, time-stamped, and safely stored in the Zipit RAP (remote administration portal) for full accountability and visibility into operations.

Emergency Comm Center personnel relaying information to field crews. Police commanders using their toughbooks to coordinate with officers. Case managers overseeing patient transfers to other facilities at their desk or nurse station.

For situations like these, when instant, reliable, and secure communication is critical, look no further than Zipit Web Messenger.

Zipit Web Messenger for desktop and pc browsers.

Secure on any browser — Communicate with your team on any computer, with any browser whether you use Internet Explorer, Safari, Firefox, or Chrome.

Seamless communication — Chat with any team member whether they are using a Zipit device, the Zipit Confirm mobile app, or a standard cell phone with ZText enabled.

No Hassle Setup — Start messaging securely in minutes with no need to install software or download applications.

Pair with Zipit RAP™ — Export secure conversations and attach them to medical records, enterprise databases, and more. Review time-stamped messages for insights into operations.

Specifics

- Secure messaging between individuals or groups
- Communicate with Zipit users and non-Zipit users (ZText)
- HIPAA Compliant
- Works with any browser
